

# PROJECT 2

✓ Published

Create a 2-4 minute MIDI sequencer arrangement of a song of your choice with melody, chords, bass, and drums.

- Automate pitch bend, modulation wheel, and volume to make it more expressive
- Double one of your tracks so that we hear the same notes played on two different synthesizer patches.
- Use a reverb plugin somewhere
- Use panning to create a wider stereo image than if everything is in mono
- Add a new page titled "Sequencing" to your portfolio. Choose "No Header" for the header type. Use it to share your work on this project
- Embed a Soundcloud player with a recording of your arrangement
- Insert a screenshot of your entire sequence showing all the tracks and the timeline. Put a caption underneath it informing a visitor what it is showing
- Include a short explanation of how you made your music expressive, how you used reverb, and what use you made of panning.

Here is [a model for what a completed Project II might look](https://must121.weebly.com/sequencing.html)  
(<https://must121.weebly.com/sequencing.html>) like on your portfolio.
